Powders. of summer to Winter and Winter to

PUNDERSON'S CONDITION

Summer, with the corresponding change of use and feed, have a very great effect upon the blood and situous fluids of Horses. It is therefore at these changes they require some assistant to nature to throw off any disorder of the fluids of the body that may have been imbibed, which if not attended to will result in the Yellow Water Heaves, Worms, Botts, &c. All of which will be entirely prevented by giving one of these Powders according to direction, and will also cure when any symption of dis-ease appear, if used in time. When from neglect or over working a horse becomes reduced, one of these powders will restore him. It will loosen the skin, raise the spirits, make him thrive and put him in condition to feed. From the similarity in the order of the secretive glands of all Herbivorous animals, these Powders have a simflar effect upon the Horse, the Ox and the Mule. Cattle designed for fattening will thrive much better and the Beef will be mucn improved by the healthy condition produ by the action of this Powder. One Powder given at the commencement of

feeding is all that is requisite. The numerous Certificates which might be published, and which can be seen at person that it is at least worth a trial.
